

◦ Incomplete

December 16

Today, my students brought the HEAT with lots of great questions :)

Here's **the recording** -- available at 2x/1.5x speed, in case you want to hurry through the knowledge without spending a full hour!

500

Internal Server Error.

What we covered today:

- Jonathan's question: "Should I build the app & then market, or should I test the market & then build?"
- Fabian's question: "How do I make an infinitely recurring item in Bubble's database, without having to create an infinite number of rows?"
- Brad's question: "How do I hook up sendgrid or mailgun or postmark to my Bubble app?"
- Vincent's question: "Any ideas on what database I should use with Bubble?"
- David's question: "Can you show me how to connect Bubble <-> Deepgram?"
- Catherine's question: "Can you show us how to build a game with NoCode?"
- Dan's question: "How do I start making money with my nocode skills?"

Thanks for all the great questions, keep 'em coming!

Until next week,

Jordan
